

WHAT IS AQUAMURA?

Aquamura is a robust and durable wall panelling system made from high-pressure WBP (Water and Boil-Proof) Birch plywood faced with an aesthetically pleasing decorative laminate. In any room installation, the tongue and grooved laminate-faced panels quickly fit together with ease and use completely hidden fixings for a clean look and a hardwearing finish.

It is a simple, attractive and economical way to effectively transform interior walls even in the most demanding of environments. Within a shower enclosure, full size boards can clad each wall, minimising joints for a hygienic solution, without the need for grout that can deteriorate over time especially when wet. One key benefit of Aquamura is that panels can be placed over existing wall finishes, making the fitting time much shorter than tiling, and minimising the duration or disruption of your project.

All our panels are purpose made to suit your individual requirements and are ideal for busy education, leisure, public sector, commercial & retail buildings or just as effective in your home. We specialise in rich tones, bright colours and natural textures to give your project a distinctive individual style that can compliment any room that may be in need of an uplifting look.

TECHNICAL INFORMATION

FITTING STANDARD PANELS

Aquamura panels have an attractive, tough laminate surface, and are constructed from quality water resistant plywood.

For best results with Aquamura panels, start in corner and finish over doorway.

Inspect panel and remove plastic film **before** fitting. Do not fit panel if any issue is found - report to supplier immediately.

Once panel has been inspected and any necessary cutting completed, apply glue to back of panel - approx 1 x 310ml cartridge per 2400 x 1200 panel.

In order to ensure a watertight seal, put a thin bead of silicone in the trim and slot panel into trim.

Press panel back to wall and CSK screw down length of grooves end. Use appropriate fixings depending on material of wall.

Apply thin bead of colour sealant into tongue edge of panel joint before fitting next panels. (Leave excess on face of panel to dry overnight and clean off the next day.)

Slide the panel into place.

Cut last panel of each wall to size. Silicone edge, fit profile and swing into place.

Mark position of final piece symmetrically over doorway. Cut panels and fix. Glue and screw where heads will be hidden by door moulding or coving.

FIXING SHOWER PANELS

Shower panels should be trimmed to the correct height and width and then installed resting on the shower tray, embedded in silicone.

Panels can be glued back to wall battens or glued directly onto a suitable wall. Aluminium internal corner jointers and end caps are recommended, with silicone applied into the extrusion.

ACCESSORIES

Aluminium jointing sections are available in 2400mm lengths in a variety of finishes: S.A.A., polished aluminium, black and white.

SPECIFICATION

CORE MATERIAL	Birch plywood
FACE MATERIAL	High pressure decorative laminate
REVERSE	Balancing laminate

DIMENSIONS

STANDARD PANEL	2400 x 590 x 11mm T&G	12kg
SHOWER PANEL	2400 x 1200 x 11mm square cut	24kg
SHOWER PANEL SPECIAL	2400 x 1200 x 11 mm T&G	24kg
SPECIAL PLAIN COLOUR PANEL RANGE	Available as above sizes and up to 3.0m high panels	

WEIGHT

CLEANING & MAINTENANCE

Wipe with a non-abrasive damp cloth and a mild spray detergent.

WARRANTY

Aquamura is guaranteed for 10 years if correctly fitted, thoroughly sealed and maintained.

DISCLAIMER

Due to variations in the photographic and printing process, the colours shown may vary compared to actual product. Natural stone decors by design will vary to replicate natural stone variances. It is recommended that actual product samples and/or retailer displays are viewed prior to purchase. We reserve the right to amend the specification of the products shown without prior notice.
